Business context

Business Context: PT Adyaraksa

PT Adyaraksa requires a centralized HR monitoring system to efficiently manage its growing workforce across strategic locations, including Jakarta, Surabaya, and Bandung. As the organization expands, executive leadership needs real-time visibility into talent retention, performance trends, and payroll transparency to mitigate financial anomalies and compensation disparities. The Executive HR Analytics & Workforce Governance Dashboard was developed to provide an integrated, data-driven solution. By consolidating key metrics—such as Active Headcount, Turnover Rate, Performance Score, and Payroll Audits—the dashboard empowers PT Adyaraksa to execute strategic decisions, maintain operational compliance, and optimize workforce governance.

Operational Scope

Multi-region workforce management across Jakarta, Surabaya, and Bandung.

Key Risks & Drivers

Addressing turnover rates, payroll anomalies, and pay equity disparities.

Strategic Impact

Enabling proactive governance, cost optimization, and unified decision-making for C-Level executives.

Cleansing

Dataset | Data Preparation & Validation | Exploratory Data Analysis (EDA) | DAX Measures & Data Modeling | Business Insights & Recommendation

Data Cleansing

1. identifying missing value & duplicate
2. Standardizing three mixed date formats (ISO, DD-MM, and DD/MM)
3. Ensuring salary, allowances, and total compensation data are accurate and calculable

Result

1,500	Total Rows (Pre-Cleaning)
8	Total Duplicate Rows Removed
1,492	Total Rows Clean (Post-Cleaning)
3	Format Standardized to ISO

Dashboard

Power Bi Recording

Overview

This project aims to transform raw **Human Resources (HR)** data into strategic, measurable, and dashboard-ready business insights. By combining PostgreSQL-based data cleansing and transformation with interactive visualization in Power BI, this project **helps executives and HR Managers in**:

1. Optimizing Talent Allocation:

Mapping headcount and demographic distribution proportionally

2. Mitigating Turnover Risk

Detecting early signals of employee departures, particularly among top performers.

3. Maintaining Operational & Financial Health

Ensuring pay equity, validating payroll history, and monitoring daily work discipline.

Insight 1 : Operational Headcount

Executive Summary

Overall, our operational workforce capacity is currently distributed across **3 Main Hubs**, with the total headcount centered in **Jakarta (256 employees)**, followed by **Surabaya (81 employees)**, and **Bandung (60 employees)**. This distribution reflects the company's strategic allocation of resources and operational budgets toward key regional business centers.

Deep-Dive Analysis

Service & Commercial Dominance

The **Customer Success (41 employees)** and **Sales (37 employees)** departments account for the largest share of capacity in Jakarta, reflecting the company's primary focus on customer retention, satisfaction, and commercial expansion from its headquarters.

Business Impact & Strategic Recommendations

Budget Optimization

Assisting management in **evaluating cost efficiency** between front-line departments (Customer Success & Sales) and technical/support departments (Engineering, Legal, & Data), ensuring that the allocation of compensation **budgets is well-targeted.**

Regional Capacity Planning

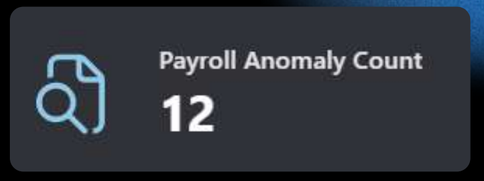

This distribution map helps HR determine whether **expanding** to the **Surabaya** and **Bandung** hubs requires additional headcount—specifically for certain operational departments—in order to **distribute the workload** from the Jakarta Hub.

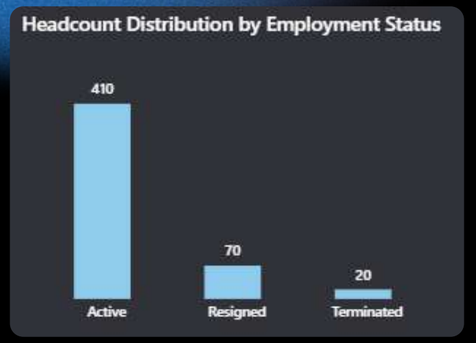

Insight 2 : Workforce Status & Retention Analysis

Executive Summary

Overall, our organization's workforce stability is in a **healthy state**, with the vast majority of employees in an "**Active**" status (including those currently on leave). Our employee **turnover rate** stands at **18%**, which remains within the industry-standard tolerance range for a modern, growing organization.

Deep-Dive Analysis

Voluntary vs. Involuntary Turnover

Voluntary **resignations** account for a **larger** share of employee departures compared to involuntary **terminations** (dismissals or contract terminations). This indicates a **need** to **evaluate** employee retention programs and levels of employee engagement.

Upper-Intermediate Performance Index

Average performance score of **3.27** out of 5.00, team productivity is generally stable. However, our primary challenge is to ensure that the **18% turnover rate** is not driven by high-performing employees (top performers).

Business Impact & Strategic Recommendations

Salary Risk Mitigation

The **12 cases** identified under "**Payroll Anomaly Count**" require immediate verification with the Payroll team to ensure that no salary payments have been issued to staff who are already marked as **"Resigned"** or **"Terminated",** and to verify that appropriate adjustments have been made regarding the entitlements of staff currently on leave.

Recommended HR Actions

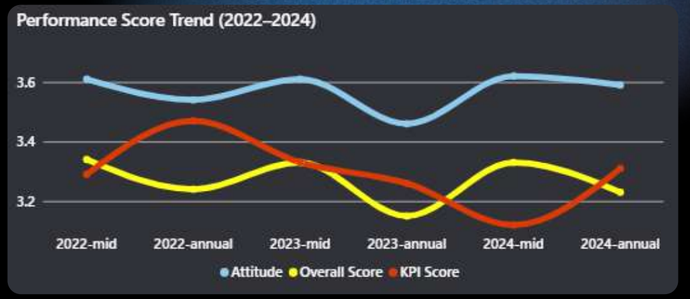

It is recommended to promptly conduct an exit interview analysis to gain deeper insight into the reasons behind the number of resignations, and to perform data cleansing on the **12 payroll entries** in which anomalies were detected.

Insight 3 : Performance Score Trend (2022–2024)

Executive Summary

Overall organizational performance (Overall Score) **remained stable** and **resilient**, staying above the standard (**3.15–3.35**) throughout the 2022–2024 period, supported by a solid work culture foundation.

Deep-Dive Analysis

Evaluation Balance

The decline in the KPI score post-2022 reflects a management transition toward setting more challenging and measurable targets. Nevertheless, overall **performance** has **remained stable**, with a **high Attitude** Score serving as a counterbalance (cushion).

Performance Indicators

The **gap** between Attitude **(3.45–3.65)** and KPI **(3.15–3.35)** indicates that while employee commitment and work discipline are **very high**, there are operational constraints or resource limitations hindering the execution of technical KPI targets.

Business Impact & Strategic Recommendations

KPI Alignment & Enablers

Evaluate operational obstacles in departments experiencing a significant decline in KPIs, and provide supporting **technical training.**

Targeted Incentive Structure

Designing a **bonus/recognition** scheme that combines **KPI achievement** with consistent 'Attitude' scores.

Insight 4 : Pay Equity & Salary Range Analysis

Executive Summary

The compensation structure for the **top 5 leadership** positions **(CFO, Head of CS, Head of Legal, Sales Director, and Head of Data)** falls within a sound and measurable salary banding framework, reflecting internal pay equity with no extreme anomalies.

Deep-Dive Analysis

Salary Band Governance

Upper limits **(Max Salary)** and lower limits **(Min Salary)** are clearly defined for all top-level positions, ensuring that the allocation of the executive-level compensation budget remains within the company's financial **tolerance thresholds.**

Salary Gap Dynamics

The existence of a salary gap (such as the I**DR 16.03 million** difference observed for the CFO position—within a range of **IDR 39.78 million** to **IDR 55.81 million)** reflects rational variations based on factors such as tenure, performance track record, and the scope of responsibilities among individuals holding the same job title.

Business Impact & Strategic Recommendations

Financial Risk Mitigation

Establishing these **standard salary** bands as an official guideline for job offers and periodic salary increases helps prevent resentment among employees, mitigates legal risks related to pay equity disputes, and ensures the efficiency of the payroll budget.

Market Benchmark & Key Talent Retention

Periodically calibrate **salary bands** against industry market benchmarks for leadership-level roles to retain strategic talent **(top performers)** and prevent them from being poached by competitors, all while maintaining the stability of the internal compensation structure.

Insight 5 : Compensation Audit

Executive Summary

Corporate adjustment policies—based on a total of 1,500 instances of salary changes—have proven to be **highly stable** and **measured**, with the average increase falling within a standardized range of **8%–9%**, regardless of the reason for the change.

Payroll Audit & Salary Change Reasons

Change Reason	Avg % Increase	Salary Decreases	Total Events
annual_review	9.05	5	398
correction	9.05	3	201
promotion	8.64	2	205
market_adjustment	8.36	2	188
initial	0.00	0	508
Total	**7.02**	**12**	**1500**

Deep-Dive Analysis

Annual & Correction Drivers

The primary compensation adjustments are driven by an "Annual Review and Correction" scheme, with an **average increase** of **9.05%**. This indicates that the annual performance evaluation serves as the company's main guide for determining compensation adjustments.

Promotion & Market Adjustment)

Salary increases based on promotions **(8.64%)** and market adjustments **(8.36%)** are aligned. This pattern reflects a competitive "pay-for-performance" standard, addressing both internal career advancement and adjustments in response to industry market dynamics.

Business Impact & Strategic Recommendations

Payroll Budget Predictability

Establishing this **8%–9%** increase range as a baseline benchmark for annual compensation budget planning (OpEx projection) ensures that the company's cash flow for labor costs remains efficient and predictable, while preventing unplanned payroll budget overruns.

Compensation Policy Alignment)

Developing a salary increase matrix that formally links **job grades**, p**erformance review results**, and **salary increase percentage ranges**, with the aim of enhancing the **transparency of the compensation system**, **retaining top talen**t, and ensuring fairness in the allocation of bonuses and salary increases across all departments.
